

**20** kindergarten children

**90** primary school pupils

**98** high school students

The RE-EURECA-PRO Project Week at the **Silesian University of Technology** in Poland was held from 29 May to 2 June 2023. Different groups of **children** participated in the event each day, bringing the total number of participants to **208**.

The first two days were dedicated to **pupils from primary schools** in small cities and villages situated near Gliwice. There were several workshops and lab tours organized on SUT campus in the building of the Centre for New Technologies. Participants learned about **green energy sources**, tested whether **electricity** can be seen, learnt what a **carbon footprint** actually is and the risks it poses to nature, discovered **visible and invisible water pollutants**, researched **climate records** imprinted in the trees, and checked how dangerous **microplastics** can be.
